- ✓ Free tools only
- ✓ Copy-paste prompts
- ✓ Honest limits

# Hi, it's Ibrahim

Thanks for grabbing this.

I've worked in digital marketing for over 12 years. AI has changed a lot of how I work, but not in the way most posts promise. It didn't write my blog for me. It took the boring parts off my desk, so I have more time for the parts that need a real person.

This kit is for bloggers, marketers and online entrepreneurs. It's also for startups and small service businesses that want more leads and sales without hiring a big team.

It has six workflows. Three help people find you. Three help you turn those people into leads and customers. Each one gives you the steps, the prompts to copy and paste, and the spots where AI tends to get things wrong, so you know what to check.

You don't need paid tools. Everything here works with the free version of ChatGPT, Gemini or Claude, plus Google Docs and Sheets.

One tip before you start: don't try all six today. Pick the one that would help you most this week and try it once on real work. That's the only way to know if it's worth keeping.

# What's inside

01 **Start here:** find your one bottleneck and build your Business Brain.

02 **Get found**

- Workflow 1: Turn what you know into a blog post outline
- Workflow 2: One blog post into a week of social posts
- Workflow 3: A simple SEO brief before you write

03 **Get leads and sales**

- Workflow 4: A 5-email welcome sequence for new leads
- Workflow 5: Turn customer questions into saved replies and an FAQ
- Workflow 6: Make your offer clearer

04 **Keep improving:** a 7-day starter plan, a weekly check and simple AI safety rules.

05 My free tool list and what's next.

# How to use the prompts

- Anything in [brackets] is for you to fill in.
- Start a fresh chat for each workflow.
- If the answer is off, don't start over. Tell it what's wrong, the way you'd tell a coworker: "Too long. Cut it in half and drop the jargon."
- Paste your Business Brain note (you'll make it in the next section) at the top of any prompt. The answers get much closer to your real business.

The "What a good answer looks like" parts are short made-up examples. They show the shape of a good answer, not real results.

# Start here

## First, pick one thing to fix

Most people open ChatGPT and try to automate everything at once. A week later, nothing has changed.

So start smaller. Take five minutes and answer these three questions honestly. Write the answers down.

- **What task takes the most time each week?** Not the hardest one. The one that eats the most hours.
- **What activity most directly brings you leads or sales?** For some people it's blog posts. For others it's replying to inquiries or following up with past clients.
- **What would change if you saved 5 to 10 hours a week?** Would you write more? Call more leads? Take a day off?

Now look at your answers and pick **one** workflow from this kit that fits. Here's a quick guide:

- Writing takes forever? Start with **Workflow 1** or **Workflow 3**.
- You publish but nobody sees it? Start with **Workflow 2**.
- People sign up and then go quiet? Start with **Workflow 4**.
- You answer the same messages every day? Start with **Workflow 5**.
- People visit your sales page but don't buy? Start with **Workflow 6**.

Do that one workflow first. The others can wait.

## Your Business Brain

AI doesn't know your business. So it fills the gaps with guesses, and the answers come out generic.

The fix is a one-page note about your business. I call it your Business Brain. You write it once, keep it in a Google Doc, and paste it into the prompts in this kit.

**Use it when:** you're about to use any prompt in this kit, and AI keeps giving you answers that could fit any business.

**You need:** ChatGPT, Gemini or Claude (free version) and a Google Doc.

## STEPS

1. Open a new chat and paste the prompt below.
2. Answer each question in rough notes. Short answers are fine. Voice typing works well here.
3. When it's done, read the summary. Fix anything that's wrong or doesn't sound like you.
4. Copy your answers and the summary into a Google Doc called "Business Brain".
5. From now on, paste this note at the top of the prompts in this kit.

## WHAT GOES IN YOUR BUSINESS BRAIN

- What you sell
- Who you serve
- The main problems you solve
- The outcome your customers want
- What makes you different
- Your brand voice (how you sound)
- Words to avoid
- Common objections (why people say no)
- Your main offer
- Your preferred call to action (what you want people to do next)

**THE PROMPT**

```
I want to write a one-page note about my business that I can paste into future AI prompts. Interview me. Ask me 10 questions, one at a time, and wait for my answer before you ask the next one. Cover: what I sell, who I serve, the main problems I solve, the outcome my customers want, what makes me different, my brand voice, words I want to avoid, the most common objections I hear, my main offer, and the call to action I prefer.

When I've answered all 10, write:

1. A one-sentence positioning statement (who I help, with what, and the result).
2. A short ideal customer profile.
3. The top 5 pains of my ideal customer.
4. The top 5 outcomes they want.
5. The biggest bottleneck you see in my business right now, based only on my answers.

Use only what I tell you. If something is unclear, ask me instead of guessing.
```

**WHAT A GOOD ANSWER LOOKS LIKE** (example only)

**Positioning:** I help busy dentists in [city] fill empty appointment slots with simple local marketing.
**Biggest bottleneck:** You get inquiries, but follow-up depends on when you have time, so some leads go cold.

**Watch out:** AI likes to make your business sound bigger and shinier than it is. If the summary says "industry-leading" or promises results you can't back up, delete it. Your Business Brain should sound like you talking to a friend, not like an ad.

**DONE WHEN**

- [ ] You've answered all 10 questions.
- [ ] You've fixed the summary so it's true and sounds like you.
- [ ] It's saved in a Google Doc you can find in 10 seconds.

# Get found

## Turn what you know into a blog post outline

**Use it when:** you know your topic but you're staring at a blank page.

**You need:** ChatGPT, Gemini or Claude (free version) and Google Docs.

The best posts come from your own experience. So here, AI interviews you first and builds the outline from your answers. The post ends up sounding like you, not like every other article on the topic.

STEPS

1. Open a new chat and paste Prompt 1.
2. Answer each question in rough notes. Typos are fine. Voice typing is even better.
3. Paste Prompt 2 to turn your answers into an outline.
4. Write the post from the outline yourself, or ask for one section at a time and rewrite it in your own words.

PROMPT 1

```
I want to write a blog post about [topic] for [who it's for]. Before you write anything, interview me. Ask me 8 questions, one at a time, to pull out my own experience, examples, mistakes and opinions on this topic. Wait for my answer before you ask the next question.
```

PROMPT 2

```
Using only my answers above, create a blog post outline. Give me a working title, a one-line promise for the reader, and H2 headings with 2 or 3 bullet points under each. Keep my examples and my wording where you can. Don't add any facts I didn't give you.
```

**WHAT A GOOD ANSWER LOOKS LIKE** (example only)

**Title:** How I Plan a Month of Blog Posts in One Afternoon
**Promise:** A simple planning routine you can copy this weekend.
**H2: The mistake I made for years** (planning one post at a time; always behind)

Notice how the headings come from your story, not from a generic "10 tips" list.

**Watch out:** AI likes to pad an outline with generic points. Delete anything you didn't say and can't back up.

**DONE WHEN**

- [ ] You've answered all 8 questions in your own words.
- [ ] Every heading in the outline comes from something you said.
- [ ] You've saved the outline in a Google Doc, ready to write.

**NOTES**

# One blog post into a week of social posts

**Use it when:** you've published something and want more out of it.

**You need:** ChatGPT, Gemini or Claude (free version) and Canva (free version) for simple graphics.

STEPS

1. Copy the full text of your post.
2. Paste Prompt 3, with your post underneath.
3. Pick the best 3 to 5 ideas and rewrite the hooks in your own words.
4. Add a photo or a simple Canva graphic, and spread them across the week.

**PROMPT 3**

```
Below is my blog post. Turn it into 10 short social media post ideas for [platform]. Each one should cover just one idea from the post. For each, give me: a hook (one line, under 12 words), the main point in 2 or 3 short sentences, and a simple call to action. Use plain words. No hashtags, no emojis. Don't add any claim that isn't in the post.

[paste your post]
```

**WHAT A GOOD ANSWER LOOKS LIKE** (example only)

**Hook:** I used to plan one blog post at a time.
**Point:** Now I plan a whole month in one sitting. I list 12 questions my readers ask, then turn each into a post.
**Call to action:** Full routine on the blog. Link in bio.

**Watch out:** the hooks often come out too excited. If one sounds like an ad, tone it down. And check every number against your post.

**DONE WHEN**

- [ ] You've picked 3 to 5 ideas worth posting.
- [ ] Each hook is rewritten so it sounds like you.
- [ ] They're spread across your week, with a graphic or photo for each.

# A simple SEO brief before you write

**Use it when:** you want a post to show up for a search term.

**You need:** Google Search, Google Docs and ChatGPT, Gemini or Claude (free version).

STEPS

1. Search your keyword on Google. Open the top 5 results that are real articles (skip ads and videos).
2. Copy each one's title and its H2 headings into a doc. It only takes a few minutes, and you'll learn a lot just by reading them.
3. Copy the questions from the "People also ask" box too.
4. Paste it all into Prompt 4.
5. Add your Business Brain note at the top, so the brief fits your readers.

**PROMPT 4**

```
I want to write a post that ranks for "[keyword]". Below are the titles and headings of the current top results, plus the "People also ask" questions.

1. What do all of them cover? (The basics I must include.)
2. What's missing or weak, where I could add something better?
3. Suggest a title and an H2 outline for my post.
4. List the questions my post should answer.

Use only what I pasted.

[paste headings and questions]
```

**WHAT A GOOD ANSWER LOOKS LIKE** (example only)

**All of them cover:** what a content calendar is, free templates, how often to post.
**Missing:** none of them show a real filled-in calendar or what to do when you fall behind.
**Your chance:** show your own calendar and how you catch up after a busy week.

**Watch out:** AI can't tell you what Google will rank. This brief shows you what's already out there. Your own experience is what makes your post better than theirs.

DONE WHEN

- [ ] You know the basics every top result covers.
- [ ] You've found at least one gap you can fill with your own experience.
- [ ] You have a title and an H2 outline saved in a doc.

# Get leads and sales

## A 5-email welcome sequence for new leads

**Use it when:** people join your email list or download your freebie, and then you never really talk to them again.

**You need:** ChatGPT, Gemini or Claude (free version), Google Docs, and your email tool (I use Kit).

Right after someone signs up, they still remember why they did. A short welcome sequence helps them get value fast, get to know you, and see what you offer next. You write it once, and your email tool sends it to every new person.

### THE PLAN

| EMAIL | WHEN | JOB |
|---|---|---|
| 1 | Right away | Deliver the freebie and tell them what to expect |
| 2 | Day 1 | Give one quick win they can use today |
| 3 | Day 3 | Share a real story or example |
| 4 | Day 5 | Answer the biggest objection |
| 5 | Day 7 | Invite them to the next step |

STEPS

1. Open your Business Brain note. You'll paste it into the prompt.
2. Fill in the brackets in Prompt 5 and paste it into a new chat.
3. Read each email out loud. Rewrite anything that doesn't sound like you.
4. Add a real story to Email 3 yourself. Never let AI make one up.
5. Paste the emails into your email tool and set the timing from the table above.

**PROMPT 5**

```
[paste your Business Brain note]

Write a 5-email welcome sequence for people who just downloaded my free [freebie name]. They are [who they are] and they want [the outcome they want].

- Email 1 (send right away): deliver the freebie and tell them what emails to expect from me.
- Email 2 (day 1): give them one quick win they can use today.
- Email 3 (day 3): leave a clear [STORY] spot where I'll add a real story or example. Write the email around it.
- Email 4 (day 5): answer this objection honestly: [the biggest reason people don't buy or reply].
- Email 5 (day 7): invite them to [the next step: book a call, reply, try my offer, read a post].

For each email, give me: a subject line, preview text, the email copy (under 200 words), and one call to action. Write like a helpful person writing to one reader. Plain words, short sentences, no hype. Don't invent results, numbers, stories or testimonials.
```

**WHAT A GOOD ANSWER LOOKS LIKE** (example only)

**Email 2 subject:** A 5-minute fix for your messy inbox
**Preview:** One small habit I'd start today.
**Call to action:** Try it now and hit reply to tell me how it went.

**Watch out:** AI loves to invent stories, like "Last year, a client of mine doubled her sales." If it isn't true, cut it. A small true story beats a big fake one every time. Also check that your email tool actually sends each email on the day you planned.

DONE WHEN

- [ ] All 5 emails sound like you and have one clear call to action each.
- [ ] Email 3 has a real story from your own work.
- [ ] The sequence is set up in your email tool and you've sent yourself a test.

NOTES

# Turn customer questions into saved replies and an FAQ

**Use it when:** you keep answering the same messages again and again.

**You need:** ChatGPT, Gemini or Claude (free version) and Google Docs.

STEPS

1. Collect 10 to 20 real questions from emails, DMs or comments. Remove names and personal details.
2. Paste them into Prompt 6.
3. Correct each reply, then save them in a Google Doc or as saved replies in your inbox.
4. Use the best ones as an FAQ on your website or sales page.

**PROMPT 6**

```
Below are real questions my customers ask
about [your product or service].

1. Group them by topic and merge the
   duplicates.
2. For each group, write a short, friendly
   reply I can save and reuse. Put [brackets]
   wherever I need to add a detail, a price
   or a link.
3. Turn the 6 most useful ones into an FAQ
   section for my website.

Write like a helpful person, not a company.

[paste the questions]
```

**WHAT A GOOD ANSWER LOOKS LIKE** (example only)

**Group: Delivery time**
**Saved reply:** Thanks for asking! Most orders take [delivery time]. You'll get a tracking link by email as soon as it ships. Anything else I can help with?

**Watch out:** never let AI guess your prices, policies or delivery times. That's what the [brackets] are for.

**DONE WHEN**

- [ ] Your questions are grouped and every reply is checked by you.
- [ ] Every [bracket] is filled with your real details.
- [ ] The replies are saved where you can paste them in seconds, and your FAQ is on your site.

# Make your offer clearer

**Use it when:** people visit your sales page, read your offer or get your quote, and then don't buy. Often the offer isn't bad. It's just unclear.

**You need:** ChatGPT, Gemini or Claude (free version) and Google Docs.

STEPS

1. Copy your current offer: the sales page text, the service description or the message you send to leads.
2. Paste your Business Brain note and your offer into Prompt 7.
3. Pick the parts you like. Rewrite them in your own words.
4. Check every promise. Can you really deliver it? If not, cut it.
5. Update your page or message, and save the old version in case you want to go back.

**PROMPT 7**

```
[paste your Business Brain note]

Below is my current offer. Help me make it clearer. Give me:

1. A clearer promise: what the customer gets, in one sentence.
2. 3 stronger headline options in plain words.
3. A simple list of exactly what they get (the deliverables).
4. 3 risk-reversal ideas that lower the risk for the buyer, like a guarantee or a free first step. Only suggest things I could really offer.
5. Honest urgency: suggest urgency only from real deadlines or limits I give you here: [real deadline or limit, or "none"]. If there are none, say so and don't make any up.
6. The 5 most likely objections, each with a short, honest answer.
7. A revised offer description I can use.

Don't invent results, numbers, testimonials or features. Plain words, no hype.

[paste your offer]
```

**WHAT A GOOD ANSWER LOOKS LIKE** (example only)

**Before:** "Full-service digital marketing solutions for growing brands."
**Clearer promise:** "I write and schedule 12 social posts a month for your bakery, so you don't have to."
**Objection:** "I can't afford it." **Answer:** "Start with one month. No long contract."

**Watch out:** no fake urgency ("only 2 spots left!" when that isn't true), no false scarcity and no invented results. They might work once, but people notice, and you lose their trust. Only offer a guarantee you're ready to honor.

DONE WHEN

- [ ] Your promise fits in one clear sentence.
- [ ] Every deliverable, guarantee and deadline is real.
- [ ] Your updated offer is live, and your old version is saved.

NOTES

# Keep improving

## Your 7-day starter plan

You don't need to do all of this in one week. But if you want a simple path, here's one. Do one small step a day.

- **Day 1:** Build your Business Brain. Save it in a Google Doc.
- **Day 2:** Answer the three "pick one thing" questions. Choose your first workflow.
- **Day 3:** Do that workflow once, on real work. Not a test. Something you actually need.
- **Day 4:** Fix what came out. Rewrite it in your voice and publish or send it.
- **Day 5:** Save the prompts that worked in a Google Doc, with a note on what you changed.
- **Day 6:** Try a second workflow. Pick the one that helps the first. (Wrote a blog post? Turn it into social posts with Workflow 2.)
- **Day 7:** Review. Run the weekly check below and decide what to keep.

## The weekly check

Once a week, take 15 minutes and look at your real numbers. Not every number. Just the few that matter for a small business or a blog.

STEPS

1. Write down last week's numbers in a Google Sheet. Use only what you have.
2. Paste them into the prompt below.
3. Pick one thing to try and one thing to stop. Write them at the top of your Sheet.

**WEEKLY CHECK PROMPT**

```
[paste your Business Brain note]

Here are my numbers from last week, with the week before in brackets:

- Website visitors: [number] ([number])
- New email signups: [number] ([number])
- Top 3 posts or pages: [list]
- Replies, inquiries or leads: [number] ([number])
- Sales: [number] ([number])
- What I published or sent: [list]

Based only on these numbers:

1. What seems to be working?
2. What isn't working?
3. One thing I should try next week.
4. One thing I should stop doing.

Keep it short. If the numbers are too small to tell, say so. Don't guess.
```

**Watch out:** one week is a short time. Small numbers jump up and down for no reason. Look for patterns over a few weeks before you make big changes.

## Simple AI safety rules

- **Review everything before you publish or send it.** AI writes fast, but it doesn't know your business like you do.
- **Never paste customer data or private documents into public AI tools.** Remove names, emails, phone numbers and anything private first.
- **Check every fact, price and claim.** AI can sound very sure about things that are wrong. Check with the official source.
- **Keep your own voice.** If it doesn't sound like something you'd say, rewrite it. People follow you, not your AI.

# My free tool list

- **ChatGPT, Gemini or Claude:** use whichever you like. The free versions are enough for every workflow here.
- **Google Docs:** for saving your Business Brain, your prompts and your saved replies, so you never hunt for them again.
- **Google Sheets:** a simple list of post ideas, what you've published, and your weekly numbers.
- **Google Search Console:** free data on how your posts do in Google search.
- **Canva:** quick graphics for your social posts.
- **NotebookLM:** ask questions about your own documents and notes.
- **Your email tool:** for your welcome sequence. I use Kit.

# What's next

Every week I'll send you one new workflow. Same format as this kit: the steps, the prompt, and what didn't work.

If something here helped you, or didn't, reply to any of my emails and tell me. I'd really like to know.

**Ibrahim**
